

Walkway TBP 105T

Safe access on the roof

Description :

A roof walkway is used to provide access on roofs, for example between chimneys etc. It provides safe access to and from inspection hatches or skylights and to roof ladders as an escape route.

Application :

For walkway on roof.

Installation :

See separate installation instructions enclosed in the package. As a safety device, the product should be inspected annually, or before use, for any damage/defects. Screws must be retightened and any damaged or defective parts replaced.

Fore more details see laying instruction on our website.

Storage :

Store in a dry place and protected from UV
