

Roof Vent 44

For ventilating roofs with a minimum 25° roof pitch

Description :

Roof vent LV44 is supplied on a bottom plate that fits shingles. The design directs rainwater away from the ventilation opening. The cowl is equipped with a wind spoiler for optimal protection against water penetration and a grille that protects against insects.

Application :

For ventilation of cold attics and roof solutions where the roof surface butts against a wall. Minimum roof pitch of 25°. The vent is adapted to Isola Roofing Shingles.

Storage :

When storing in sunlight, the roof vent must be unpacked from the plastic.

Approvals and guarantee

Installation :

Install the roofing shingles up to the front edge of the vent. Install the vent. Apply two strips of Isola Sealant, then place the roofing shingles on the vent collar. See separate installation instructions.

Fore more details see laying instruction on our website.
