

MEMBRA® Cuff for Floor

Self-adhesive membrane system for wet rooms

Description :

Membra Drain Gasket consists of PE foam and butyl adhesive protected with a silicone-treated tear-off foil

Application :

Membra Drain Gasket is part of the Membra Wet Room System. The product is used to ensure a robust and waterproof seal with drain penetrations. The gasket offers excellent adhesion to solid substrates such as concrete, screed, plasterboard etc.

Installation :

Membra Drain Gasket is installed by first removing the locking ring on the drain. Then remove the protective foil so that the gasket can be fitted in the drain and stuck well to the substrate. Use a profiling tool to stick the gasket down firmly. Finally, fit the locking ring back to the drain. See separate installation instructions.

NB: The substrate must be firm, clean, dry and free from grease. Always prime the floor first with Membra Adhesive Primer.

For more details see laying instruction on our website.

Storage :

Dry and protected from UV

Accessories for :

MEMBRA® Membranduk
